

BURGERTIME SOLVE

This is the meta, so it incorporates all the previous answers. Teams need to make a few realizations to move forward:

- 1.) The burger they have is a Big Mac, and it needs to be assembled in the proper order, as listed by the big mac jingle from the 70s and 80s
- 2.) The locations that they solved the previous clues at all have names suggestive of bic mac layers.
- 3.) They need to write the answers on the layers according to the numbers- first letter of the answer in the spot marked 1 etc
- 4.) There is a bite missing from each layer, but there is still a letter that needs to go in that spot, and the bite actually reveals a message.

The data looks like this:

		Top of Burger			
Ingredient	Location	Answer	Bitten Off Letter	First Toothpick Message	Second Toothpick Message
Sesame Seed Bun	Open Sesame Sushi Shop	HISTOOTH PICK	C	SP	TH
Onions	White River Park	BEHINDFRIDGE	I	IN	EG
Pickles	Mr Dill's Cany Shop	BRIGHT YELLOW	R	WI	OL
Cheese	American Pharmecutical	UNDERFEDDEAD	E	DD	DE
Lettuce	Iceberg Ice Pops	FOURTWENTYAM	M	ER	NA
Special Sauce	Thousand Island Family Restauran	CHEESEBURGER	U	SH	RC
All Beef Patty	Sacred Ground Coffee Shop	HOLEINLARYNX	N	IN	HE
Bottom Bun	-	-	-	S (written in ketchup)	S (written in ketchup)
		Bottom of Burger			

The first toothpick message is gotten by assembling the burger properly, and sticking toothpicks through the layers so that they hit the "X" marks on the bottom bun. The toothpicks will go through the indicated letters and spell SPIN WIDDERSHINS.

The instructions indicate that the bitten off message will indicate how far to spin the layers- you spin each layer as many places as the alphanumeric value of the letter from numeric that is on that layer. So you spin the Sesame Seed Bun layer 3 clicks counter-clockwise (widdershins) because the bitten off letter is a C. The onion layer gets spun 9 clicks, because the bitten off letter was an I. Etc. For values 12 and higher, the layer just gets spun fully around, and the process keeps going.

Once all the layers have been spun properly, if you reinsert the toothpicks, again so that they hit the "X" marks on the bottom bun, the final message can be read.

The final answer is THE GOLDEN ARCHES
